

Leak Finder

Description

A leak finder tool that is again rugged, accurate, affordable and wireless. The Leak Finder is the first leak finder that is fully automatic and there is no coaxial cable or wire from the microphone to the amplifier or to the headphones. The microphone, amplifier and transmitter are one unit and smaller than most cellular phones. The headphones have the receiver built right in. No more tangled wires or ambient noise from cables moving or being worn.

The Leak Finder is a great way to get another technician out and finding leaks fast. One button operation makes it fast to learn and with some simple practice one will be finding leaks fast with the Leak Finder.

The Leak Finder is a must for the leak detection arsenal. At a price below US \$ 1.000,- (including the showed adapter, listening stick and three leg pedestal) one can't afford not to have one.

Technical Data

| | |
